

ANETA CZARNA

FLORA OF VASCULAR PLANTS IN KSIĄŻ WIELKOPOLSKI COMMUNE (CENTRAL WIELKOPOLSKA)

*From Department of Botany
The August Cieszkowski Agricultural University of Poznań*

ABSTRACT. On the total area of Książ Wlkp. commune, the occurrence of 1001 species of vascular plants has been found. Among them, there are six species new for the Wielkopolska flora: *Allium rotundum*, *Eragrostis ciliaris*, *Malope trifida*, *Ranunculus friesianus*, *Sparganium neglectum* and *Veronica peregrina* and two species new for the Polish flora – *Taraxacum cristatum* and *Typha × glauca*.

Key words: Wielkopolska, Książ Wlkp. commune, vascular flora

Introduction

Vascular flora of Książ Wlkp. commune (Śrem district, Wielkopolska province) has not yet been the object of separate research by geobotanists. Only in the work of **Spribile** (1883) and **Szulczewski** (1951), one can find single records of species, and in the work of **Kaczmarek** (1962) there are some localities of calciphilous plants from the discussed area. Our own previous floristic studies supplied information about rare and interesting plant species from the area of Książ Wlkp. (**Czarna** 1989, 2001, 2005 a, b, **Głowiak** and **Czarna** 2003, **Głowiak et al.** 2005).

During field studies carried out in the years 1986-2003, a number of interesting vascular plants were recorded whose localities deserve to be mentioned here. In the list below, there are among others: 1) rare species in the scale of Poland (Paprotniki... 2001), 2) species entered into the “red list” for Poland (**Jasiewicz** 1981, **Zarzycki** and **Szelag** 1992) and species from the “red list” for Wielkopolska (**Żukowski** and **Jackowiak** 1995), 3) species not widely spread on the terrain of Książ Wlkp. commune, 4) interesting geographic and directional elements, 5) plants bioindicating the presence of specific ecosystems not frequent in the scale of the Wielkopolska region, etc.

The objective of the present studies was an elaboration and analysis of the vascular flora of Książ Wlkp. commune so far not investigated from the floristic point of view.

Particular attention was focused on rare and perishing species or species subject to legal protection.

One of the important objectives of this inventory was the characterization of the vegetation cover on areas particularly valuable for natural science and the determination of protection methods for them. This objective will providing be reached the area of the commune receives an exact floristic list of species and plant communities (**Kuświk et al.** 2000).

Names of the species have been accepted after **Mirek et al.** (1995). Herbary material has been deposited in the Herbary of Plant Taxonomy Department of the Adam Mickiewicz University (POZ) in Poznań and in the Department of Botany, Agricultural University in Poznań (POZN). Difficult and problematic species have been determined by specialists: *Taraxacum* (Z. Głowiak – Siedlce), *Oenothera* (K. Rostański – Katowice), *Orchidaceae* (L. Bernacki – Katowice), *Rubus*, *Rosa*, *Salix* and *Crataegus* (J. Zieliński – Kórnik-Poznań).

Systematic list of the actual flora

After the author's name of species nomenclature, there follows in 'square brackets' the geographico-historical group, life form and the socio-ecological group.

Ophioglossaceae: *Ophioglossum vulgatum* L. [Sp, G, 8]

Athyriaceae: *Athyrium filix-femina* (L.) Roth [Sp, H, 1], *Matteuccia struthiopteris* (L.) Tod. [D, H, 19]

Thelypteridaceae: *Thelypteris palustris* Schott [Sp, G, 6]

Aspidiaceae: *Dryopteris carthusiana* (Vill.) H.P. Fuchs [Sp, H, 2], *D. cristata* (L.) A. Gray [Sp, H, 6], *D. dilatata* (Hoffm.) A. Gray [Sp, H, 1], *D. filix-mas* (L.) Schott [Sp, H, 2], *Gymnocarpium dryopteris* (L.) Newman [Sp, G, 1], *G. robertianum* (Hoffm.) Newman [Sp, G, 18]

Aspleniaceae: *Asplenium ruta-muraria* L. [Ap, H, 18]

Hypolepidaceae: *Pteridium aquilinum* (L.) Kuhn [Sp, G, 2]

Polypodiaceae: *Polypodium vulgare* L. [Sp, H, 2]

Equisetaceae: *Equisetum arvense* L. [Ap, G, 16], *E. fluviatile* L. [Sp, Hel, 7], *E. hyemale* L. [Sp, G, 19], *E. palustre* L. [Sp, G, 8], *E. pratense* Ehrh. [Sp, G, 1], *E. sylvaticum* L. [Ap, G, 1]

Pinaceae: *Larix decidua* Mill. [D, M, 2], *Picea abies* (L.) H. Karst. [Ken, M, 2], *Pinus banksiana* Lamb. [D, M, 2], *P. nigra* J.F. Arnold [D, M, 2], *P. strobus* L. [D, M, 2], *P. sylvestris* L. [Ap, M, 5], *Pseudotsuga menziesii* (Mirb.) Franco [D, M, 2]

Cupressaceae: *Juniperus communis* L. [Sp, N, 5], *Thuja occidentalis* L. [D, N, 19], *T. orientalis* L. [D, N, 19]

Betulaceae: *Alnus glutinosa* (L.) Gaertn. [Sp, M, 6], *A. incana* (L.) Moench [Ken, M, 7], *Betula pendula* Roth [Ap, M, 2], *B. pubescens* Ehrh. [Sp, M, 6]

Corylaceae: *Carpinus betulus* L. [Sp, M, 1], *Corylus avellana* L. [Sp, N, 1]

Fagaceaeae: *Fagus sylvatica* L. [Sp, M, 1], *Quercus petraea* (Matt.) Liebl. [Sp, M, 2], *Q. robur* L. [Sp, M, 1], *Q. rubra* L. [Ken, M, 2]

Junglandaceae: *Juglans regia* L. [D, M, 19]

Salicaceae: *Populus alba* L. [Ap, M, 7], *P. balsamifera* L. [D, M, 19], *P. nigra* L. [Ap, M, 7], *P. italicica* Moench. [D, M, 19], *P. tremula* L. [Ap, M, 2], *P. × canescens* (Aiton) Sm. [Ap, M, 7], *Salix acutifolia* Willd. [D, N, 5], *S. alba* L. [Ap, M, 7], *S. caprea* L. [Ap, N, 3], *S. cinerea* L. [Sp, N, 6], *S. fragilis* L. [Ap, M, 7], *S. pentandra* L. [Sp, N, 6], *S. purpurea* L. [Ap, N, 7], *S. triandra* L. [Sp, N, 7], *S. viminalis* L. [Ap, N, 7], *S. × rubens* Schrank [Ap, N, 7], *S. × rubra* Hudson [Ap, N, 7]

Moraceae: *Morus alba* L. [D, M, 19]

Cannabaceae: *Cannabis sativa* L. [D, T, 14], *Humulus lupulus* L. [Sp, H, 7]

Urticaceae: *Urtica dioica* L. [Ap, H, 3], *U. urens* L. [Arch, T, 16]

Ulmaceae: *Ulmus glabra* Huds. [Ap, M, 1], *U. laevis* Poll. [Ap, M, 1], *U. minor* Mill. emend. Richens [Ap, N, 1]

Loranthaceae: *Viscum album* L. subsp. *album* [Ap, Ch, 1], *V. album* L. subsp. *austriacum* (Wiesb.) Vollm. [Sp, Ch, 5]

Polygonaceae: *Fallopia convolvulus* (L.) Á. Löve [Arch, T, 16], *F. dumetorum* (L.) Holub [Sp, T, 2], *Polygonum amphibium* L. [Ap, G, 10], *P. aviculare* L. [Ap, T, 10], *P. bistorta* L. [Sp, G, 8], *P. hydropiper* L. [Ap, T, 12], *P. lapathifolium* L. subsp. *brittingeri* (Opiz) Rech. F. [Ap, T, 12], *P. lapathifolium* L. subsp. *lapathifolium* [Ap, T, 12], *P. lapathifolium* L. subsp. *pallidum* (With.) Fr. [Ap, T, 16], *P. minus* Huds. [Ap, T, 12], *P. mite* Schrank [Ap, T, 12], *P. persicaria* L. [Ap, T, 16], *Reynoutria japonica* Houtt. [D, G, 19], *Rheum rhabarbarum* L. [D, H, 19], *Rumex acetosa* L. [Ap, H, 9], *R. acetosella* L. [Ap, G, 5], *R. conglomeratus* Murray [Ap, H, 10], *R. crispus* L. [Ap, H, 10], *R. hydrolapathum* Huds. [Sp, Hel, 7], *R. maritimus* L. [Ap, T, 12], *R. obtusifolius* L. [Ap, H, 13], *R. sanguineus* L. [Ap, H, 1], *R. thysiflorus* Fingerh. [Ap, H, 14]

Chenopodiaceae: *Atriplex hortensis* L. [D, T, 19], *A. nitens* Schkuhr [Arch, T, 15], *A. patula* L. [Ap, T, 16], *A. prostrata* Boucher ex DC. [Ap, T, 11], *Chenopodium album* L. [Ap, T, 16], *Ch. bonus-henricus* L. [Arch, T, 15], *Ch. ficifolium* Sm. [Arch, T, 16], *Ch. glaucum* L. [Ap, T, 12], *Ch. hybridum* L. [Arch, T, 16], *Ch. murale* L. [Arch, T, 15], *Ch. polyspermum* L. [Ap, T, 12], *Ch. rubrum* L. [Ap, T, 12], *Ch. striatiforme* Murr. [Ap, T, 16], *Ch. strictum* Roth [Ken, T, 15], *Ch. suecicum* Murr [Ap, T, 16], *Corispermum leptopterum* (Asch.) Iljin [Ken, T, 15], *Kochia scoparia* (L.) Schrad. [Ken, T, 19]

Amaranthaceae: *Amaranthus albus* L. [Ken, T, 15], *A. caudatus* L. [D, T, 19], *A. chlorostachys* Willd. [Ken, T, 16], *A. cruentus* L. [D, T, 19], *A. lividus* L. [Ken, T, 16], *A. retroflexus* L. [Ken, T, 16]

Portulaceae: *Portulaca oleracea* L. [D, T, 19]

Caryophyllaceae: *Agrostemma githago* L. [Arch, T, 17], *Arenaria serpyllifolia* L. [Ap, T, 5], *Cerastium arvense* L. [Ap, H, 9], *C. biebersteinii* DC. [D, H, 19], *C. glomeratum* Thuill. [Sp, H, 19], *C. holosteoides* Fr. em. Hyl. [Ap, H, 9], *C. macrocarpum* Schur em. Gartner [Ap, H, 1], *C. semidecandrum* L. [Ap, T, 5], *Cucubalus baccifer* L. [Sp, H, 3], *Dianthus carthusianorum* L. [Sp, H, 2], *D. deltoides* L. [Ap, H, 2], *Gypsophila fastigiata* L. [Sp, H, 5], *G. muralis* L. [Ap, T, 12], *Herniaria glabra* L. [Ap, H, 5], *Holosteum umbellatum* L. [Ap, T, 5], *Lychnis chalcedonica* L. [D, H, 19], *L. coronaria* Desr. in Lam. [D, T, 19], *L. flos-cuculi* L. [Sp, H, 5], *Melandrium album* (Mill.) Garcke [Ap, H, 14], *M. noctiflorum* (L.) Fr. [Arch, T, 16], *M. rubrum* (Weigel) Garcke [Sp, H, 2], *Moehringia trinervia* (L.) Clairv. [Sp, H, 2], *Myosoton aquaticum* (L.) Moench [Ap, H, 7], *Petrorhagia prolifera* (L.) P.W. Ball & Heywood [Ap, T, 4], *Sagina nodosa* (L.) Fenzl. [Sp, H, 8], *S. procumbens* L. [Ap, H, 12], *Saponaria officinalis* L. [Ap, G, 14], *Scleranthus annuus* L. [Arch, T, 17], *S. perennis* L. [Ap, H, 5], *Silene armeria* L. [D, T, 19], *S. nutans* L. subsp. *glabra* (DC.) Rothm. [Sp, H, 2], *S. nutans* L.

subsp. *nutans* [Sp, H, 2], *S. tatarica* (L.) Pers. [Sp, H, 5], *S. vulgaris* (Moench) Garcke [Ap, H, 14], *Spergula arvensis* L. [Arch, T, 16], *S. morisonii* Boreau [Ap, T, 5], *Spergularia rubra* (L.) J. Presl & C. Presl [Ap, T, 5], *Stellaria graminea* L. [Ap, H, 2], *S. holosteia* L. [Ap, H, 1], *S. media* (L.) Vill. [Ap, T, 16], *S. neglecta* Weihe [Sp, T, 1], *S. nemorum* L. [Sp, H, 1], *S. pallida* (Dumort.) Piré [Ap, T, 16], *S. palustris* Retz. [Sp, H, 8], *S. uliginosa* Murray [Ap, H, 12], *Viscaria vulgaris* Röhl. [Ap, H, 2]

Euphorbiaceae: *Euphorbia cyparissias* L. [Ap, H, 4], *E. esula* L. [Ap, H, 14], *E. helioscopia* L. [Arch, T, 16], *E. lucida* Waldst. & Kit. [Sp, H, 5], *E. marginata* Pursh [D, T, 19], *E. peplus* L. [Arch, T, 16], *E. cyparissias* L. × *E. lucida* Waldst. & Kit. [Sp, H, 5], *Mercurialis perennis* L. [Sp, G, 1]

Callitrichaceae: *Callitricha hamulata* Kütz. ex W.D.J. Koch. [Ap, Hyd, 7], *C. verena* L. em. Lönnr. [Ap, Hyd, 7]

Aristolochiaceae: *Asarum europaeum* L. [Sp, H, 1]

Berberidaceae: *Berberis vulgaris* L. [Ap, N, 4], *Mahonia aquifolium* (Pursh) Nutt. [D, N, 19]

Ranunculaceae: *Actaea spicata* L. [Sp, H, 1], *Anemone nemorosa* L. [Sp, G, 1], *A. ranunculoides* L. [Sp, G, 1], *A. sylvestris* L. [Sp, H, 4], *Batrachium aquatile* (L.) Dumort. [Sp, Hyd, 7], *B. circinatum* (Sibth.) Fr. [Sp, Hyd, 7], *B. peltatum* Schrank [Sp, Hyd, 7], *B. trichophyllum* (Chaix) Bosch [Sp, Hyd, 7], *Caltha palustris* L. subsp. *cornuta* (Schott, Nyman & Kotschy) Hegi [Sp, H, 8], *C. palustris* L. subsp. *palustris* [Sp, H, 8], *Clematis vitalba* L. [D, N, 19], *Consolida ajacis* (L.) Schur [D, T, 19], *C. orientalis* (J. Gray) Schrödinger [D, T, 19], *C. regalis* Gray [Arch, T, 17], *Ficaria verna* Huds. [Sp, G, 1], *Hepatica nobilis* Schreb. Lemnaceae: *Lemna gibba* L. [Sp, Hyd, 7], *L. minor* L. [Sp, Hyd, 7], *L. trisulca* L. [Sp, Hyd, 6], *Spirodela polyrhiza* (L.) Schleid. [Ap, Hyd, 7], *Wolffia arrhiza* (L.) Hor-kell ex Wimm. [Sp, Hyd, 6]

Araceae: *Acorus calamus* L. [Ken, Hel, 7], *Calla palustris* L. [Sp, Hel, 6]

Sparganiaceae: *Sparganium emersum* Rehmann [Ap, Hel, 7], *S. erectum* L. em. Rchb. [Sp, Hel, 7], *S. neglectum* Beeby [Sp, Hel, 7]

Typhaceae: *Typha angustifolia* L. [Sp, Hel, 7], *T. latifolia* L. [Sp, Hel, 7], *T. × glauca* Godr. [Sp, Hel, 7]

Analysis of flora

Floristic studies carried out on the total area of the Książ Wlkp. commune permitted to elaborate a list of vascular plants including 1001 taxa. This number includes nine subspecies and 21 hybrids. The identified taxa belong to 106 families and 431 genera. The number of species among 106 families is contained in the interval from 1 to 127. Families with the greatest number of species include: *Asteraceae* – 128, *Poaceae* – 88, and *Rosaceae* – 67. There are 28 families with only one representative. The greatest number of species was found in the genera: *Carex* (34 species), *Taraxacum* (30), *Veronica* (21) and *Rubus* (16).

In the analysed flora, there dominate native taxa: spontaneophytes (355 species) and apophytes (369) (Table 1). Species of a foreign origin represent totally 277 species. Among them, there dominate diaphytes and archeophytes, while kenophytes constitute the smallest group. Among archeophytes, there appear very interesting species such as: *Allium rotundum*, *Bromus arvensis*, *Chenopodium bonus-henricus*, *Conium maculatum*, *Kickxia elatine*, *Ranunculus arvensis*, *Sherardia arvensis* and *Valerianella ramosa*.

Table 1
Participation of geographical-historical groups in the flora of the Książ Wlkp. commune
Udział grup geograficzno-historycznych we florze gminy Książ Wlkp.

Geographical and historical group Grupa geograficzno-historyczna	Sp	Ap	Ar	Ken	D
Number of species Liczba gatunków	355	369	99	69	109

Sp – non-synanthropic spontaneophytes, Ap – apophytes, Ar – archaeophytes, Ken – kenophytes, d – diaphytes.

Sp – spontanofity niesynthropijne, Ap – apofity, Ar – archeofity, Ken – kenofity, d – diafity.

On the basis of Raunkiaer's life form analysis, it was found that the greatest participation in the studied flora is shown by hemikryptophytes (418 species) and therophytes (290). Geophytes (94) (Table 2) are distinguished by a comparatively high participation. The presented spectrum of Raunkiaer's life forms does not deviate from the characteristic pattern for the whole climatic zone and for the area of Poland.

Table 2
Participation of life forms in the flora of the Książ Wlkp. commune
Udział form życiowych we florze gminy Książ Wlkp.

Life form Forma życiowa	M	N	Ch	H	G	Hel	Hyd	T
Number of species Liczba gatunków	48	56	27	418	94	33	35	290

M – megafanerophytes, N – nanofanerophytes, Ch – chameophytes, H – hemicryptophytes, G – geophytes, Hel – helophytes, Hyd – hydrophytes, T – therophytes.

M – megafanerofity, N – nanofanerofity, Ch – chamefity, H – hemikryptofity, G – geofity, Hel – helofity, Hyd – hydrofity, T – terofity.

Distribution of species in socio-ecological groups on the studied area is differentiated and all units have their representatives. The most numerously represented is group 19 with a not closely defined phytosociological affiliation (106 species), as well as the species from acid oak trees, bright oak forests, mixed woods and their substitute clearing communities, meadow and turf communities – group 2 (105 species) (Table 3). A rather numerous group is represented by species growing in fertile deciduous forests and shrub communities – group 1 (91 species), and also in forests and waterside thickets, rush and water communities – group 7 (89 species) and in garden weed communities and field root crops – group 16 (80 species). On the other hand, the least number of species is shown by groups 11 and 18. i.e. species occurring on salty soils, and by halophilous meadow-and-rush communities and eplitic communities.

Among the recorded plants, there are as many as 44 species covered by a legal protection (Ordinance of 2004) (Fig. 1). Plants subject to total protection include: *Anemone*

Table 3
Participation of socio-ecological groups to the flora of the Książ Wlkp. commune

On the area of the commune, there occurred also partially protected plants including: *Asarum europaeum* (1 loc.), *Convalaria majalis* (7 loc.), *Frangula alnus* (12 loc.), *Gallium odoratum* (1 loc.), *Hedera helix* (3 loc.), *Helichrysum arenarium* (10 loc.), *Manyanthes trifoliata* (2 loc.), *Nuphar luteum* (7 loc.), *Nymphaea alba* (3 loc.), *Ononis arvensis* (1 loc.), *O. spinosa* (2 loc.), *Primula veris* (2 loc.), *Ribes nigrum* (1 loc.), *Viburnum opulus* (3 loc.), *Vinca minor* (1 synantropic loc.).

Valorization of vascular flora resources in Książ Wlkp. commune is shown in Table 4:

1) Among species entered in the Polish Red Book of Plants (Paprotniki... 2001) there are: *Allium rotundum*, *Ostericum palustre* and synantropic localities of *Lathyrus latifolius* and *Rosa gallica*.

2) Among rare and threatened species from the “red list” for Poland (Jasiewicz 1981, Zarzycki and Szeląg 1992), there are 15 species (Table 5).

3) From the “red list” for Wielkopolska (Żukowski and Jackowiak 1995) 80 species were found in 139 localities (Fig. 2).

Table 5
Participation of perishing and threatened species in the scale of Poland and Wielkopolska
to the flora of the Książ Wlkp. commune
Udział gatunków ginących i zagrożonych w skali Polski i Wielkopolski we florze gminy
Książ Wlkp.

	Ex	E	V	R	K	I	Sum of species Suma gatunków	Percentage of total flora Procent całej flory
Polska (Zarzycki and Szeląg 1992)	0	1	4	9	0	1	15	1.5
Wielkopolska (Żukowski and Jackowiak 1995)	0	10	41	25	0	4	80	8.0

It is worth noting that there appeared six new species for the flora of Wielkopolska:

1. *Allium rotundum* – two localities:

- a) Konarskie – on a high railway embankment with southern exposure, about 100 m to the west from the railway station, 30 specimens (2003),

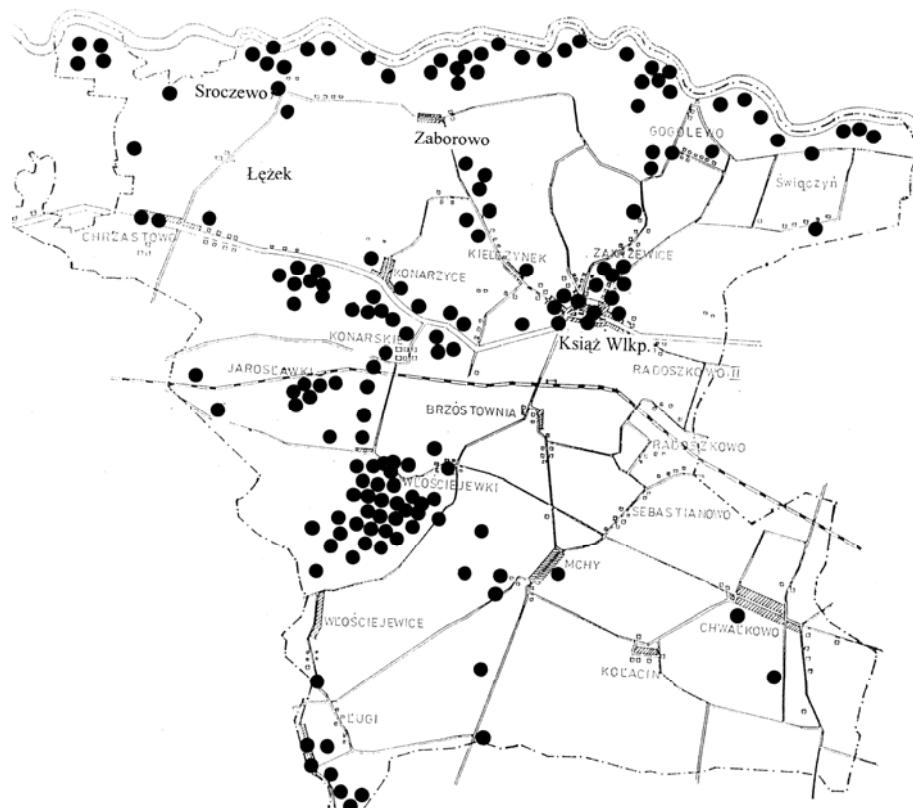

Fig. 2. Localization of perishing species entered in "red lists" for Poland (Jasiewicz 1981, Zarzycki and Szelaż 1992) and Wielkopolska (Żukowski and Jackowiak 1995) within the borders of Książ Wlkp. commune

Ryc. 2. Lokalizacja gatunków ginących uwzględnionych na „czerwonych listach” dla Polski (Jasiewicz 1981, Zarzycki i Szelaż 1992) i Wielkopolski (Żukowski i Jackowiak 1995) w granicach gminy Książ Wlkp.

b) Jarosławki – a grassy clearing adjoining from one side to the railway embankment, and from the other side adjacent to an arable field, about 80 specimens (2003). The populations require a constant observation.

2. *Eragrostis ciliaris* – one locality. An ephemeral appearance at the railway station in Książ Wlkp.

3. *Malope trifida* – one locality. Several specimens were growing in 1999 on a dumping ground in Książ Wlkp.

4. *Ranunculus friesianus* – one locality. Konarskie – several specimens on a meadow at a highroad from Książ Wlkp. It occurs together with *Trisetum flavescens*.

5. *Sparganium neglectum* – one locality. The Jarosławki Lake – in a ditch at the southern bank of the lake.

6. *Veronica peregrina* – one locality. The locality is on a wet road passing across a meadow at the Warta river in Srocze. The species occurs numerously together with *Cardamine parviflora* (2002).

New for Polish flora was *Taraxacum cristatum* which was found in Książ Wlkp. – in a robinia forest at “Torfica”, and *Typha × glauca* found in Konarzyce – it is not numerous in a pond on the area of a big gravel-pit lying in the southern direction from the village.

Floristically the most valuable places on the area of Książ Wlkp. commune include: 1) the Jarosławki Lake localized north from the Jarosławki village, 2) a complex of deciduous forests with glacier ponds to the south-west from Włościejewki, 3) a small bog with peat moss floating mire in the Włościejewki Forest to the north from Włościejewki, 4) a meadows and a lake in Konarskie, 5) a post-manor park in Włościejewki, 6) the Warta river valley along the total section (Fig. 3).

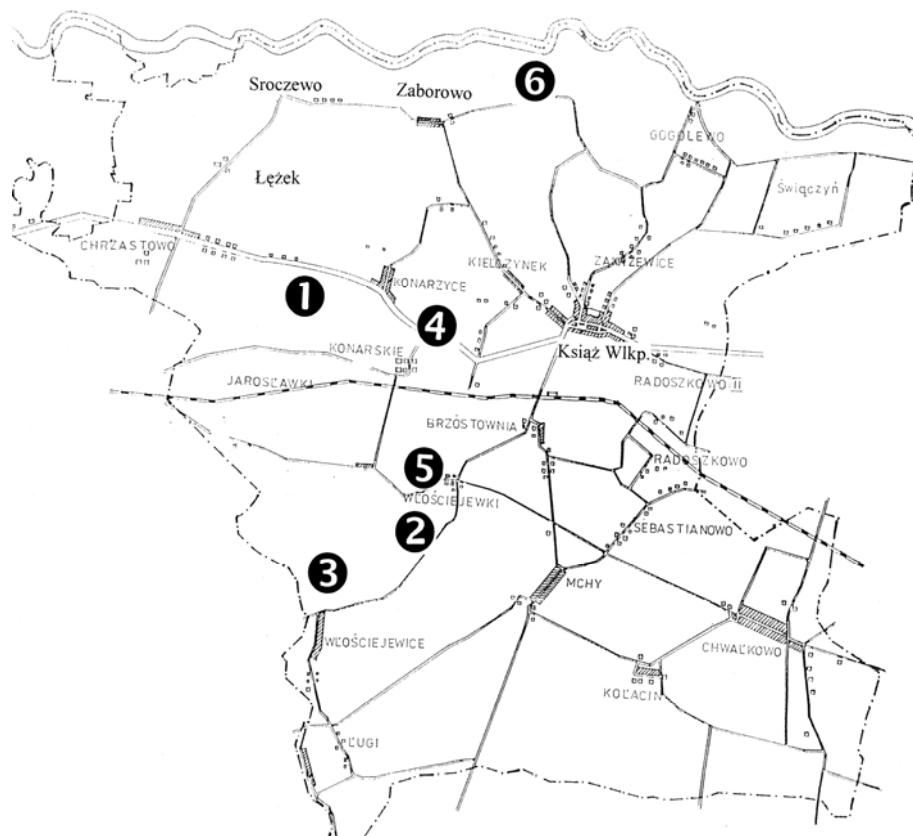

Fig. 3. Localization of the floristically most interesting terrains on the area of Książ Wlkp. commune: 1 – Jarosławki Lake, 2 – deciduous forest with glacier ponds to the south-east from Włościejewki village, 3 – small bog with peatmoss floating mire to the north from Włościejewice village, 4 – meadows and a small lake in Konarskie, 5 – post-manor park in Włościejewki, 6 – Warta river valley

Ryc. 3. Lokalizacja najciekawszych florystycznie terenów na obszarze gminy Książ Wlkp.: 1 – jezioro Jarosławki, 2 – lasy liściaste z oczkami wodnymi na południowy zachód od wsi Włościejewki, 3 – bagienko z płem torfowcowym na północ od wsi Włościejewice, 4 – ląki i jeziorko w Konarskim, 5 – park podworski we Włościejewkach, 6 – dolina rzeki Warty

FLORA ROŚLIN NACZYNIOWYCH GMINY KSIĘŻ WIELKOPOLSKI (ŚRODKOWA WIELKOPOLSKA)

S t r e s z c z e n i e

Na terenie gminy Księże Wlkp. stwierdzono występowanie 1001 taksonów, wśród których jest dziewięć podgatunków i 21 mieszańców. Stwierdzono także występowanie sześciu gatunków nowych dla flory Wielkopolski: *Allium rotundum*, *Eragrostis cilianensis*, *Malope trifida*, *Ranun-*

culus friesianus, *Sparganium neglectum* i *Veronica peregrina* oraz dwóch nowych dla flory Polski – *Taraxacum cristatum* i *Typha × glauca*.

Najcenniejszymi florystycznie miejscami na terenie gminy Książ Wlkp. są: 1) jezioro Jarosławki położone na północ od wsi Jarosławki, 2) kompleks lasów liściastych z oczkami wodnymi na południowy zachód od Włościejewek, 3) bagienko z płem torfowcowym w Lesie Włościejewskim na północ od Włościejewic, 4) łąki i jeziorko w Konarskim, 5) park podworski we Włościejewkach, 6) dolina rzeki Warty na całym odcinku.
