### ABSTRACT

North-East India is a region with many native freshwater fishes and is one of the ichthyofaunal hotspots of the world. According to the current study, a total of 197 valid species of fish has been reported from Nagaland, India, which consists of 10 orders, 26 families and 87 genera, from various lotic and lentic habitats. Family Cyprinidae consists of the highest record of 75 fish species and Osphronemidae, Gobidae, Scianenidae and Chacidae families with the lowest record of one fish species in each.

**Keywords:** North-East India, Ichthyofaunal hotspots, lotic and lentic habitat, Nagaland, Cyprinidae

### 1. INTRODUCTION

Northeast is known as one of the hot spots of the global biodiversity of freshwater fish that include substantial fish germplasm reserves. This region of India comprises eight states, viz: Assam, Arunachal Pradesh, Manipur, Meghalaya, Mizoram, Nagaland, Tripura and Sikkim. The abundance of ichthyofaunal diversity in this region is by forming part of the Himalayas and Indo-Burma. A total of 422 species belonging to 39 families is present in the Northeast region.

Nagaland is a small hilly mountainous state, in the northwestern corner of the country. It is situated between 25°6'-27°4' N latitudes and between 93°2'-95°1' E longitudes. The state of Nagaland has many rivers and hill streams blessed by the unusual exotic fish fauna.

The state has 11 major rivers, viz: Dhansiri, Dikhu, Doyang, Intangki, Meguiki, Milak, Shili, Tizit, Tizu, Tsurang, and Zungki, and 10 minor rivers viz: Arachu, Chathe, Chokla, Dzulakie, Dzuna, Lanyi, Likhimro, Seidzu, Tepuiki and Tesuru that discharge their content to the three drainage system, viz: Brahmaputra drainage, Chindwin drainage and Barak drainage.

The present effort was taken up to review the fish fauna recorded from Nagaland based on the available works of literature.

## 2. DISCUSSION

The present review shows the presence of 197 valid fish species belonging to 10 orders, 26 families and 87 genera. The list of fish species recorded from Nagaland is given in **Table 1**. Cyprinidae lead the record with 75 species followed by Balitoridae with 21 species, Sisoridae with 20 species, Bagridae with 12 species, Cobitidae with 10 species, Channidae with 7 species, Siluridae with 6 species, Erethistidae with 5 species, Schilbeidae and Clariidae with 4 species, Psilorhynchidae, Amblycipitidae, Mastacembelidae, Chandidae and Belontidae with 3 species each, Notopteridae, Anguillidae, Belonidae, Synbranchidae, Nandidae, Anabantidae and Cichlidae with 2 species each and Osphronemidae, Gobidae, Scianenidae and Chacidae with one species each, as shown in **Table 2**.

Earlier reports represented 149 fish species from Nagaland. Later Goswami *et al.* in 2012 reported 187 fish fauna from Nagaland. Acharjee *et al.* also in 2012 added 2 more known fish species during their ichthyological survey at Dhansiri River. Odyuo and Nagesh as well added one more known fish species during their fishery and management status assessment of Doyang Reservoir in 2012. Imnatoshi and Ahmed afterward in 2013 added 3 more known fish fauna during their survey in Doyang River. Humtsoe and Bordoloi then in 2014 during its survey in 12 streams, viz: Engorotchu, Kyotchu, Lungkitchu, Nhyatsutchu, Nitsutchu, Tchulumo, Tchupvu, HumtsoTsupvu, Sosirotchu, Vekhvurotchu, YikhumSanga and Tsurang of Wokha

district Nagaland added one known fish species. The whole record of fish fauna known from Nagaland were further examined from Eschmeyer's Catalog of Fishes Online Database (2019) for their current status and validity.

**Table 2.** Number of fishes identified from different families from Nagaland.

Family	Total no of fishes
Cyprinidae	75
Balitoridae	21
Sisoridae	20
Bagridae	12
Cobitidae	10
Channidae	7
Siluridae	6
Erethistidae	5
Schilbeidae	4
Clariidae	4
Psilorhynchidae	3
Amblycipitidae	3
Mastacembelidae	3
Chandidae	3
Belontidae	3
Notopteridae	2
Anguillidae	2
Belonidae	2
Synbranchidae	2
Nandidae	2
Anabantidae	2
Cichlidae	2
Osphronemidae	1
Gobidae	1
Scianenidae	1
Chacidae	1

### 3. CONCLUSION

Although the state of Nagaland records 197 species of fish and is characterized by plentiful rivers and streams, it is not yet assessed and explored, due to its remoteness and inaccessibility. The Department of fisheries of Nagaland and similar organizations should therefore, take up the lead role in exploring and documentation of fish fauna. To develop a proper planning and create awareness amount the local mass, for sustainable exploitation and for conservation of fish fauna, lest fish fauna deplete due to anthropogenic and other activities.
