ABSTRACT. This work presents a list of 139 localities for 16 species of liverworts collected in West Pomerania and Silesia (NW and SW Poland).

## INTRODUCTION

The article presented localities of liverworts collected by the late Dr Jolanta Kujawa-Pawlaczyk, a former employee of Poznań University of Life Sciences, Department of Forest Botany. After her death, the collection was donated by P. Pawlaczyk to P. Górski. The specimens have been collected during the field work for monitoring of natural habitats conservation status in West Pomerania and Silesia, in 2014–2017.

This work presents a list of 139 localities for 16 species. The researched objects, in most cases, did not have the bryological documentation so far. Only a few, e.g. ‘Janiewickie Bagno’, ‘Warnie Bagno’, ‘Bagno Kusowo’, and ‘Żurawie Bagno’ have been previously documented (SZWEYKOWSKI & KOZLIKA 1969, GÓRSKI et al. 2015, 2016, ROSADZIŃSKI 2015, GÓRSKI & KIASZEWICZ 2018).

All specimens have been determined by P. Górski. The names of liverworts are in accordance with the list of KLAMA & GÓRSKI (2018). Herbarium materials are deposited in W. Szafer Institute of Botany, Polish Academy of Sciences, Kraków (KRAM-B).
